3-PHASE GENERATOR REVERSE POWER AND OVERLOAD GUARD

KCW17x

- **Precision Generator kW Load Protection, not affected by heavily distorted waveforms**
- **Available for 3-phase, 3-wire (2W3) or 4-wire (3W4) systems**
- **Definite time trip delays**
- **2-level overload protection (F versions)**
- **Up to two individual very fast analogue output signals (<50mS), (optional)**
- **Wide range setting of overload contact hysteresis**
- **DIN96 Slave Indicator with status LEDs (optional)**

Specifications

Monitored Voltage:	100-120V, 200-240V, 380-415V, 440-460V, 480VAC 40-70Hz (Fuse 0,5A)
Optional Separate Auxiliary Voltage AC:	100-120V, 200-240V, 380-415V, 440-460V, 480VAC 40-70Hz (Fuse 0,5A)
Optional Separate Auxiliary Voltage DC:	12-48VDC (Fuse 0,5A) 110-220VDC (Fuse 1A)
Supply tolerance:	+10%, -20%
Power rating:	5VA
Current Input:	1A CT or 5A CT, <0,1VA
Contact rating:	AC: 100VA -250V/2A max. DC: 50W -100V/1A max.
Adjustments:	Depending on the selected model (see page 2 & 3)
Output kW range:	Any % of the scale
Analogue output 1:	mA: Up to 20mA, max 500R V: Up to 10V, min 100kohm (other on request)
Analogue output 2: (see page 4 for available outputs)	mA: Up to 20mA, max 500R V: Up to 10V, min 5kohm or optional 500ohm (other on request)
Accuracy:	Class 0,5
Temperature:	-20 to +70ºC
Humidity, relative:	0-95%
Weight:	0.6kgs
Front protection:	IP21
Flammability:	UL94-V0

The unit meets EN 60255-27 Cat. III, Pollution degree 2 and the relevant environmental and EMC tests specified in EN 60255-26 to comply with the requirements of the major Classification Societies.

Related information:
The KCW17x series are also available for panel mounting as KPW17x series.

Description

The digitally controlled KCW17x range provides precision (1.0%) reverse power and overload protection and monitoring of three phase generators.

The unit measures the voltage and current true r.m.s. value, and accuracy is independent of any wave form distortion.

The standard models takes the auxiliary supply voltage from the monitored voltage (terminal 1 & 2).

It can also be delivered with optional separate AC or DC auxiliary voltage (terminal 26 & 27), but that must be specified when ordering (see page 4 for ordering code for separate Aux. Supply).

User settable trip levels and delays. Colour of LEDs indicate alarm status. Alarm LEDs flash during count-down.

LED status		
Power	O/L	R/P
●	●	●
Normal	Alarm	Alarm

See page 2 & 3 for models with 2 x O/L

LED status		
Power / O/L1	O/L2	R/P
● / ●	●	●
Normal / Alarm	Alarm	Alarm

Start of monitoring function is delayed when power is switched on (default 2 secs delay). In this way false tripping during power up is avoided.

The DIN-rail mounted instrument reads the power level directly in kW. The optional slave watt-meter and the triple-zone status LEDs at a glance gives the clear safety message:

- OVERLOAD
- NORMAL
- REVERSE POWER

OUTPUTS
Up to two individual very fast analogue output signals (optional) proportional to kW range (see page 2 and 3 for models with outputs). This may be used as an input to a control system, to detect abnormal power conditions (loss of excitation etc). If output is used for remote meter reading, we recommend 0-1mA for the slave indicator.

RELAY OUTPUTS
Relay operation depends on the selected model (see page 2 and 3). Other combinations are available on request.

Description

Relay Operation

The relay operation is delayed in the arrow direction, the reset is instantaneous. Both trip levels can, independently, individually set over the scale range (0-100% FSD).

KCW171C / H - KCW176AA / AB - KCW176HA / HB

Configuration: 3-Phase, 3-Wire (2W3) **Meter:** Bi-Polar 1

Reverse power relay (R3) is used to trip the generator breaker. The overload relay (R1) can be used for non-essential load release or as start signal to standby generator etc. A wide range overload hysteresis can be set to enable R1 to be used for non-essential load to be reconnected or as standby generator stop signal.

Relay R2 is intended for notification of a reverse power condition, or can be used for local indication, as input to an alarm system etc. R2 and R3 will latch after trip.

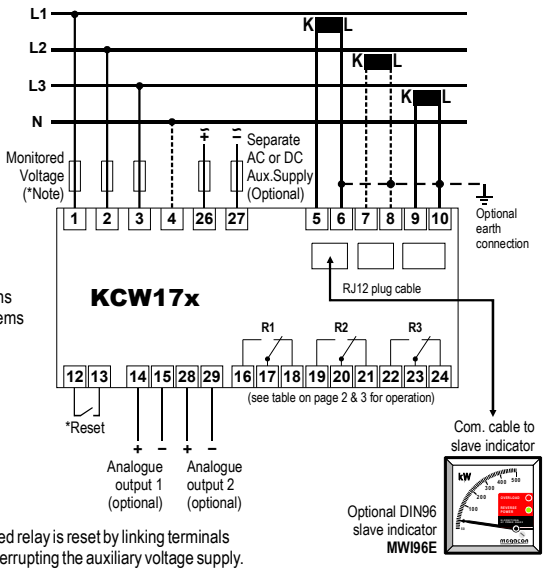
Dotted connections are for 4-wire sytems

***Note:**
The standard models takes the auxiliary supply voltage from the monitored voltage (terminal 1 & 2).

Connection Diagram with optional slave instrument



NB!
Dotted connections are for 4-wire sytems

***Reset:** Any latched relay is reset by linking terminals 12 and 13 or by interrupting the auxiliary voltage supply.

NB! To ensure correct kW measurement, the voltage phase sequence and CT connections must be as shown on connection diagrams.

Analogue Output

The output signals are proportional to the meter reading (see page 2 & 3 for an overview of models and functions).

The signal is specifically intended as an input to a control system for monitoring or control.
